# Press Release

**The revolutionary Multi Handset 3 in 1 with camera barcode reader is ready and available for deliveries after the TETRA World Congress 2012.**

The Multi Handset 3 in 1 is demonstrated at the stands of Stop Noise (J303), Cassidian (A201) and Portalify (B303) in TWC Exhibition. Stop Noise welcomes everyone to come and see the hottest new accessory of the show in action. More information can also be found from the just renewed Stop Noise website [www.stopnoise.fi](http://www.stopnoise.fi).

**Laukaa, Finland 10<sup>th</sup> May 2012:** Stop Noise Finland Ltd. is proud to present the world's first handheld TETRA accessory that can handle audio, data and images. The idea behind the Multi Handset is that TETRA user organizations can easily collect data and utilize their existing databases from the field through their secure network. In addition the versatile Multi Handset offers a bunch of other useful features from status messaging to a LED torch light. And a USB interface makes it possible to connect auxiliary appliances such as passport or smart card readers. All this is packed into the users' favorite audio accessory – speaker microphone.

The first Multi Handsets with camera based barcode readers will be available after the TETRA world Congress 2012. And other versions will follow later. Stop Noise announces that they are looking for new active distributors for this unique product.
